HAVE WE DISCOVERED THE CAUSE OF CHRONIC DISEASE?

NEW UNIFIED THEORY OF DISEASE CAUSATION IS CHANGING THE DISCUSSION OF HOW WE VIEW DOZENS OF PATHOLOGIES
The Unified Theory of Disease Causation

Delta Advisory Council

For those suffering from a chronic illness treatment options are limited and often non-existent. Since 1920 we have expended over 2.7 Trillion dollars on cancer research as just one example, and yet treatments for cancer remain virtually unchanged. With this in mind the Delta Institute has proposed a unified theory of disease causation.

This unified theory consists of three foundational pillars. First, predisposing factors, second, correlative variables, and finally the mechanism of impairment related to a given condition. Predisposing factors pertain to a host of features that pave the way for disease to take hold, while not being causative in nature themselves. They weaken the body, compromise immunity, among other things. Examples include, genetics, epigenetics, immunodeficiency, and environmental factors just to name a few. Treating any of these problems will lead to some improvement, however the actual cause is not addressed and the sickness remains. A simple comparison is dehydration.

A central problem that prevents the medical community from understanding disease in general, lies in the persistence of a flawed theory which attempts to understand disease at the level of the symptom, and not causation.
It is common in patients who are dehydrated to have chapped lips. However chapped lips do not cause dehydration, they are simply a correlative variable and until the patient begins to take in sufficient fluids, the dehydration will continue, no matter how much chap stick is applied.

Some common correlative variables for chronic diseases include, inflammation, apoptosis, cell mediated toxicity, and oxidative stress to name only a few. Many physicians and medical professionals spend the majority of their time dealing with these correlative variables, which will naturally lead to some improvement. However true remediation will never be achieved for some conditions if the root cause is left unchecked.

The final pillar in this theory of causation is founded in identifying the exact mechanism of impairment associated with the illness.

This pillar is an essential prerequisite to the development of any meaningful treatment strategy. Delta’s research has consistently demonstrated that impaired mitochondrial functioning lies at the root cause of many chronic pathologies.

Dysfunctional mitochondria fail to provide vital cellular energy in the form of ATP, thus initiating a series of cellular events which affect virtually every system within the human body. The theory states that mitochondrial dysfunctions in energy metabolism are frequently initiated by elusive bacterial agents known as stealth pathogens.

Because these organisms lack a cell wall, they are able to integrate with mitochondrial structures in a way that it reduces electron transfer across the inner membrane of the mitochondria, resulting in decreased ATP output.

This comprehensive approach provides a firm footing for Delta’s unified theory of disease causation offering a rational framework for ongoing development of the BX protocol. A protocol intended to restore mitochondrial health through eliminating the root cause of illness itself. True remediation and meaningful health restoration.
Many people find themselves stricken with disease or illness. If you are one of these people, this is something you will want to read:

It seems you’re always at the doctor’s office. Sometimes it takes weeks or months to get into the doctor in the first place. The treatments they offer seem to help for a short time, but within months, you are headed back to the doctor again with the same issues. You become frustrated and long for a different solution.

Wouldn’t it be nice to have all of that right in your own home? To have your very own virtual doctor’s office or hospital. To have access to your very own care staff, someone there to assist and answer your questions and concerns as they occur?

One day you decide enough is enough! You get on your computer to see what you can find. You come across some kind of Virtual Medical Center. It’s like a virtual hospital that you can access from your own computer. The treatment is unlike anything you have ever seen!

You start to learn more and become very intrigued. You discover that this program includes the deployment of the first ever, full service web-based health care system in the world! It is built on the foundation of a revolutionary medical subculture distinct in its approach to supporting chronic disease. It has extensive impressive capabilities which include:

- In House Research and Development
- Technologies Development and Manufacturing
- Nano-Nutaceuticals Development and Manufacturing
- Practitioner Training through Delta University
- Local Medical Support Integration
- Clinic to Home Integration
- Protocol Development
- Back Office Case Management and Support
- Educational Media Development Tools.

This healthcare innovation is a new way of doing things from the ground up.

At the heart of its engine is the virtual back office case management system, is as described above, sort of like an internet hospital. A sophisticated web-application that provides its members with direct access to clinical and administrative staffs, ongoing education, workshops, and much more.
You become excited and decide to register as a member of the program! You are then provided with log in credentials that allow you to enter their Personalized Back Office through their website! This is where you get to interact with their staff 5 days a week!

Once in the back office, you communicate with the case management staff, through the back office email system. They even have a live chat that is supported with peer to peer video conferencing and voice functionality. You get to conveniently upload your medical records, allowing the medical team to efficiently conduct medical reviews in preparation for beginning the program.

Next, they provide you with custom reporting tools tailored to your specific needs. You find that Reporting is comprehensive and covers blood work, vitals, signs and symptoms, psychology of health, exercise, and activities of daily living. Data is collected daily through the entire program over a broad range of areas, they have statistical analysis capabilities, far superior to data derived solely through clinical interactions with the patient. The system allows the medical team to understand the relationship between more than 500 data points.

This correlative framework allows them to identify the connection between, for example, blood pressure and pain rankings, or between white blood cell count and inflammation. You have finally found the treatment program you had been dreaming of! This Virtual Program Described above is called: Delta Institute's Health Restoration Delivery Model.

Delta recognizes that one on one interaction is an important part of case management, the long term developments of the Back Office Case Management software are centered in supporting a system's based approach to medicine.

Imagine a web-based case management system that incorporates intelligent analysis of the individual case. A system that acknowledges the complexity of interactions between data variables is a system that is more capable of accounting for the holistic needs of the patient.

The ultimate goal of Delta's virtual back office case management system is to transform health care by analyzing, designing, implementing, and evaluating information and communication systems, that enhance individual health outcomes, improve patient care, and strengthen the case manager-patient relationship. Delta's web-based medical culture is like a university without borders, where the patient and medical professional collaborate in an effort to achieve meaningful, long term health restoration. Delta is dedicated to the globalization of this platform.

We now invite you, to take a visual look at Delta Institute's Health Restoration Delivery Model:

You can do so by watching the following video:
